BRAC UNIVERSITY

Quiz 1 **Department of Computer Science and Engineering**

CSE110: Programming Language I Duration: 40 minutes Marks: 20

Name: (Please write in CAPITAL LETTERS)	ID:	Section: 38

1. Write a python program that will take an integer number (N) from the user and print all the divisors of that number which are in between **3 to N (inclusive) and divisible by 2**. If the summation of the divisors is a multiple of 5 then divide the summation by 5 and print it. Otherwise, print the input number. [Marks 10]
   . [CO 3 + CO 4]

Sample Input 1:

78

Sample output 1:

6 26 78

22.0

Explanation:

All the even divisors of 78 in between 3 to 78 are 6, 26, and 78. The summation of all the divisors is 6 + 26 + 78 = 110 which is a multiple of 5. After dividing the summation by 5, the result is 110/5 = 22.0

Sample Input 2:

66

Sample output 2:

6 22 66

66

Explanation:

All the even divisors of 66 in between 3 to 66 are 6, 22, and 66. The summation of all the divisors is 6 + 22 + 66 = 94 which is not a multiple of 5. So the result is 66.

1. Trace the below table and write the outputs in the given boxes. You MUST show the trace table. [Marks 10] [C0 3 + CO 4]

1	`p, sum , z = 0 , 20, 70`
2	`while (z > 7):`
3	`  while ( sum < z+1 ):`
4	`    p = z + sum -29`
5	`    print(7 + (p // 5))`
6	`    sum += 10`
7	`  z -= 15`
8	`print(False and (True or not True) or not False)`
9	`print(sum // 7 + 2)`
10	`print(z+2 > 9 or False)`
11	`print(int(69/7 + 7))`

Output
