BRAC UNIVERSITY

Quiz 1 **Department of Computer Science and Engineering**

CSE110: Programming Language I Duration: 40 minutes Marks: 20

Name: (Please write in CAPITAL LETTERS)	ID:	Section: 30

1. Write a python program that will at first take how many items a customer will buy from a shop. Then take the price of all the items from the user. If the total cost of the items is divisible by 5 then the customer will get a 5% discount on the total cost. Otherwise, the customer will get a 10% discount on the total cost. Print the actual price and the price after the discount. [Marks 10]
   . [CO 3 + CO 4]

Sample Input 1:

5

98

45

112

3342

65

Sample Output 1:

Price before discount: 3662

Price after discount: 3295.8

Explanation:

As the user enters 5 as an input, that's why the program should ask the price of 5 items from the user. The total cost of the items is 98+45+112+3342+65 = 3662 which is not divisible by 5. So the customer will get a 10% discount. After discount the total price is 3662-(3662 x 10%) = 3295.8

2. Trace the below table and write the outputs in the given boxes. You MUST show the trace table. [Marks 10] [C0 3 + CO 4]

1	`p, sum , z = 0 , 20, 70`
2	`while (z > 7):`
3	`  while ( sum < z+1 ):`
4	`    p = z + sum -29`
5	`    print(3 + int (p / 5))`
6	`    sum += 10`
7	`  z -= 15`
8	`print(False and (True or not True) or not False)`
9	`print(sum // 7 + 2)`
10	`print(z+2 > 9 == False)`
11	`print(int(69/7 + 3))`

Output
