BRAC UNIVERSITY

Quiz 2 **Department of Computer Science and Engineering** **SET B**

CSE110: Programming Language I Duration: 35 minutes Marks: 20

Name: (Please write in CAPITAL LETTERS)	ID:	Section: 30

1. Write a python program that will take **a one-word string** as input from the user. Print only those characters of the string whose ASCII value is an odd number. Also, print the number of characters whose ASCII value is odd. [Marks 10]
[CO 3 + CO 4+ CO 6]

Sample Input 1:

Cse110

Sample output 1:

Odd characters: Cse11

Number of odd ASCII value characters: 5

Explanation:

ASCII value of the characters are C = 67, s = 115, e = 101, 1 = 49, 1 = 49 and 0 = 48. Among all the characters, C,s,e, 1, and 1 have odd ASCII values. So the first output is cse11 and the number of odd characters is 5.

Sample Input 2:

WorldCup

Sample output 2:

Odd characters: WoCu

Number of odd ASCII value characters: 4

Explanation:

ASCII values of the characters are W - 87, o - 111, r - 114, l - 108, d-100, C-67, u -117, p-112. W, o, C, and u have odd ASCII values among the characters. So the first output is WoCu and the number of odd characters is 4.

2. Trace the below table. You MUST show the trace table. [Marks 10]

[CO 3 + CO 4+ CO 6]

1	`value = ""`
2	`i, j, k = 1, 1, 15`
3	`while i< 5:`
4	`    k-=1`
5	`    j = k`
6	`    while j > 11:`
7	`        if (j % 2) == 0:`
8	`            value = str(i) + "-->" + str(int(j / 3))`
9	`        else:`
10	`            value = "-->" + str(int(i / 3)) + str(value) + str(j)`
11	`        print(value)`
12	`        j = j-1`
13	`    i+=1`
14	`print(value[1:4])`
15	`print(int(8.9)//3+4*2)`
16	`print(True and (len(value)== 5))`
17	`print(len(value))`
