BRAC UNIVERSITY

Quiz 2 **Department of Computer Science and Engineering** **SET D**

CSE110: Programming Language I Duration: 35 minutes Marks: 20

Name: (Please write in CAPITAL LETTERS)	ID:	Section: 38

1. Write a python program that will take a string input from the user. You have to remove all the spaces and then find the sum of the ASCII value of the string characters. Print the updated string and the summation of ASCII values. You are not allowed to use the built-in remove function. [Marks 10]

[CO 3 + CO 4+ CO 6]

Sample Input 1:

W o r LD

Sample output 1:

WorLD

456

Explanation:

After removing the spaces, the updated string is WorLD. The summation of ASCII values of the updated string is 87+111+114+76+68 = 456 (W - 87, o - 111, r - 114, L - 76, D - 68)

Sample Input 2:

Python

Sample output 2:

Python

642

Explanation:

As there are no spaces, so the updated string is Python. The summation of ASCII values of the updated string is 80+121+116+104+111+110 = 642 (P - 80, y - 121, t - 116, h - 104, o - 111, n - 11) .

2. Trace the below table. You MUST show the trace table. [Marks 10]
[CO 3 + CO 4+ CO 6]

1	`value = ""`
2	`i, j, k = 1, 1, 15`
3	`while i< 5:`
4	`    k-=1`
5	`    j = k`
6	`    while j > 11:`
7	`        if (j % 2) == 0:`
8	`            value = str(i) + "-->" + str(int(j / 3))`
9	`        else:`
10	`            value = "-->" + str(int(i / 3)) + str(value) + str(j)`
11	`        print(value)`
12	`        j = j-1`
13	`    i+=1`
14	`print(value[1:4])`
15	`print(int(8.9)//3+4*2)`
16	`print(True and (len(value)== 5))`
17	`print(len(value))`
