CSE110: Programming Language I Duration: 35 minutes Marks: 20

Name: (Please write in CAPITAL LETTERS)	ID:	Section: 38

1. Suppose you are given a tuple of tuples. You have to make a dictionary where the keys will be the tuples of the given tuple and the values will be the average of each tuple. Also, print the key whose value is the maximum. [Your program should work for any given tuple]

   Given Tuple:
   ((22, 22, 13), (30, 78, 45,4), (81, 959, 39, 45), (1, 4, 4,5,6))
   Output:
   {(22, 22, 13): 19.0, (30, 78, 45, 4): 39.25, (81, 959, 39, 45): 281.0, (1, 4, 4, 5, 6): 4.0}
   Max = (81, 959, 39, 45)

2. Illustrate the outputs of the following statements. Provide your workings on the answer script to verify your outputs. Your answer will not be accepted without the workings. All the outputs must be in the question paper.
