BRAC UNIVERSITY

Quiz 3 **Department of Computer Science and Engineering** **SET C**

CSE110: Programming Language I Duration: 35 minutes Marks: 20

Name: (Please write in CAPITAL LETTERS)	ID:	Section: 42

1. Suppose you are given a tuple of tuples with odd and even numbers. You have to make a dictionary where the keys will be the average of the even numbers of each tuple and its corresponding value will be the sum of the odd values of each tuple. Print the new dictionary. [Your program should work for any given tuple]

   [Marks 10]
   [CO 3 + CO 4+ CO 6]

   Given Tuple:
   ((20, 22, 13), (30, 33, 45,4), (81, 76, 30, 45), (1, 7, 4,2,6))

   Output:
   {21: 13, 17: 78, 53: 126, 4: 8}

   Explanation:
   The even numbers and odd numbers of the first element of the tuple are 20,22 and 13 respectively. So the average of even numbers is (20+22)/2 = 21 and the summation of the odd numbers is 13. Therefore, the first (key: value) pair is (21:13).

2. Illustrate the outputs of the following statements. Provide your workings on the answer script to verify your outputs. Your answer will not be accepted without the workings. All the outputs must be in the question paper.

[Marks 10]
[CO 3 + CO 4+ CO 6]

		Output
1	givenList = [0, 9, 2, 9, 10, 11, 5, 4, 3, 17]	
2	newList = [33,1,0]	
3	a , b, c = 2, 5, 0	
4	newList = givenList	
5	print(len(newList))	
6	while(a<9):	
7	b = (b + a) % 2	
8	while(b<a):	
9	givenList[a] = newList[a]- givenList[b]+c	
10	b = b+1	
11	print(givenList[a])	
12	a = a+1	
13	c += 2	
14	print(1 in newList)	
15	new_var = tuple('55')	
16	print(new_var)
